

**Supplemental Images #1 & #2—Cooper's Hawk (right) and Sharp-shinned Hawk (left).** How do you tell them apart? That's not a bad question. But, first, make sure they're even accipiters! Despite the rather disheveled look of these two hawks, we can be certain that they are accipiters; note how their wingtips barely extend beyond the undertail coverts. That field mark alone is sufficient to separate ABA Area accipiters from all other raptors in the region. *LEFT: Centennial Valley, Beaverhead County, Montana; Sept. 8, 2015. **What do the Sandpiper, the Blue-Footed Booby and the Glossy Ibis all have in common?**

First, they are all aquatic birds, but more importantly, they are all featured in *The Aquatic Birds Coloring Book*, the latest addition to Coloring Concepts' extensive library of science-based coloring edutainment books.

Second, *Aquatic Birds* not only introduces you to almost 30 of these glorious members of the Chordata phylum, it does so in a way that only kinesthetic learning can provide.

**“Water-loving birds, like ducks, geese, herons, and sandpipers, have fascinated us for centuries. . . . [The Aquatic Birds Coloring Book] is a great way to deepen your knowledge of these wonderful birds while relaxing with your colored pencils.”**  
**— David Yarnold, CEO & President, National Audubon Society**

From beak to tail, *Aquatic Birds* is informative and relaxing fun. Order your copy today at [www.coloringconcepts.com](http://www.coloringconcepts.com)!
